Subject: Re: Spill info

Can confirm that use of MCHM at this operation ceased prior to spill.

Initial estimate of 108,000 gallons of slurry are checking out to be accurate. We will have our samples back today early afternoon. No additional impact is expected at this time. Another note from what I saw last night, company was successful to some degree in containing much of the spill at least the larger particles on site. Didn't do much for the appearance of water but did minimize some of the deposition to stream which we will be assessing today
